Subject: Trigger Point Injections*

Effective Date: December 9, 2003

Department(s): Utilization Management

Policy: Trigger point injections are reimbursable under Plans administered by QualCare, Inc.

Objective: To assure proper and consistent reimbursement and to assure appropriate utilization of a specific service.

Procedure:

1. The following documentation must accompany the physician’s request to perform trigger point injections:

   A. Evidence of history of one of the following chronic (more than 3 months) pain syndromes with corresponding ICD-9 code:
      
      - neck (723.1, 723.9)
      - upper extremity (726.19, 726.39)
      - lower extremity (726.5, 726.71, 726.72, 726.79, 726.90)
      - back (720.1, 724.2)
      - myofascial (729.1)

      AND

   B. Evidence that trigger points have been identified by palpation by a physician

      AND

   C. Failure of less invasive measures, including but not necessarily limited to: bed rest, exercises, heating or cooling
modalities, massage, or pharmacotherapies, such as NSAIDs, muscle relaxants, and non-narcotic analgesics.

AND

D. Trigger point injections are not administered in isolation, but are provided as part of a comprehensive pain management program, including physical therapy, patient education, psychosocial support, and pain meds where appropriate.

2. Trigger point injections are not reimbursable for diagnoses other than the chronic pain syndromes listed in 1.A.

3. Not more than 3 trigger point injections per anatomic area are reimbursable within a 12-month period.

4. Not more than 1 trigger point injection per anatomic area is reimbursable within a 7-day period.

5. The only appropriate CPT codes for trigger point injections are 20552 (1 or 2 muscles) and 20553 (three or more muscles). These codes are covered ONLY ONCE PER SESSION, regardless of the number of injections or muscles involved.

6. The CPT codes 20550 (injection[s] of tendon sheath, ligament) and 20551 (injection[s] of tendon origin/insertion) shall not be used to indicate a trigger point injection.

**Appendix:** Trigger Point Injection: is a procedure used to treat discrete, focal, hyperirritable and painful areas of muscle that contain “trigger points” or knots of muscles that form when muscles do not relax. These “knots” can often be palpated under the skin and may irritate the nerves around them causing “referred pain” to another part of the body. The trigger point injection is an injection with a local anesthetic with or without steroids.
